U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 14 December 2006 have been fully considered but they are not persuasive. Specifically, in regards to In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., Applicant's argument against the rejection of Claim 1 that Moffat et al. does not each an auxiliary power supply that is arranged independently from the plasma generating power supply so that plasma generation and plasma introducing speed to the process targets can be controlled independently for preventing damage of the process targets by direct impact of the plasma) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). In the case of instant Claim 1, the broadest reasonable interpretation of the claim merely requires a supply of power connected to the active plate electrode and a supply of power connected to the process target, both limitations being met by Moffat et al.'s teaching of power supply 102 being connected to each of the active plate electrode and the process target. The claim does not require that the power be supplied by separate and independently controllable power sources for each of the active plate electrode and the process target.
